| SUMMARY OF OUTCOMES FOR THE MEETING OF THE WOOL INDUSTRY EDP USERS GROUP HELD ON MONDAY THE 29th OF JANUARY 2007 |
|--|

SUMMARY OF OUTCOMES

1. Next Release Version 29.1.

Due to some members' difficulty in being able to meet a Version 30 deadline of July 2007, a Version 29.1 will be released so that not all users will have to upgrade. This Version 29.1 release will be effective Monday July 23rd 2007.

The changes in the release are:

Editorial Changes.

These affect certain Yield Types and the Condition regarding Core Test Sampling Date in Document Formats AC, GI, LI, PC and TC.

Fields in the 21C Record are now not mandatory.

Update to the Wool Description and Catalogue Symbol fields in the Data Dictionary.

Addition of Request Flag for Pesticide Residue Test.

This has been added to the 55 Record in Document Format TRV.

The Date Delivery Required field is now conditional within the 24B Record.

Proposed changes to the 21C Record regarding counts of under/overweight bales have been withdrawn and changes to improve the Internalization of the Records have been held over to the next release.

2. Future EDI Direction

The Committee is planning to prepare a paper outlining the future direction and strategic positioning of EDI within the wool industry. This study will cover many issues including future record formats, transfer/delivery mechanisms including email, future of networks, implementation of version releases and cost impact to the industry.

It was decided that to progress this further, face to face meetings of the committee will be required with the first to be held in April 2007.

If anyone has suggestions for the future or comments on the current systems, please direct them in writing to the Secretary, Nigel Stewart, at AWEX by the end of March.
