A guide to the Premium and Discount Report.

To calculate a price for your wool:

1. Select the appropriate price from the base micron tables If VM Base <= to 1.0 % do not discount for VM type.
2. Apply the relevant premiums or discounts When applying premiums and discounts to XF5 (Good style) use 25.0 range.
3. Your calculated price will be in AUD cents/kg clean. Discounts and Premiums are calculated using a range of data covering the last 2 months of sales in the region.
4. To calculate greasy price, multiply by yield and divide by 10!
