## Web Site

### **Training Website**

The WoolClip training environment has been released. This site allows:

- a) Wool classing students to build Jobs and save data for training and assessment purposes. Students are assigned a temporary Wool Classer-ID.
- b) Interested persons the opportunity to try/train before registering on the production site. A Job and small quantity of associated data (mob, bales etc.) is automatically pre-generated on entry to which the temporary user can add or modify. All data is deleted when the user exits.

The URLs to this site will be released under separate cover.

### **Report Updates**

- The Wool Book Print report has been updated.
- The draft Specification Print has been updated.

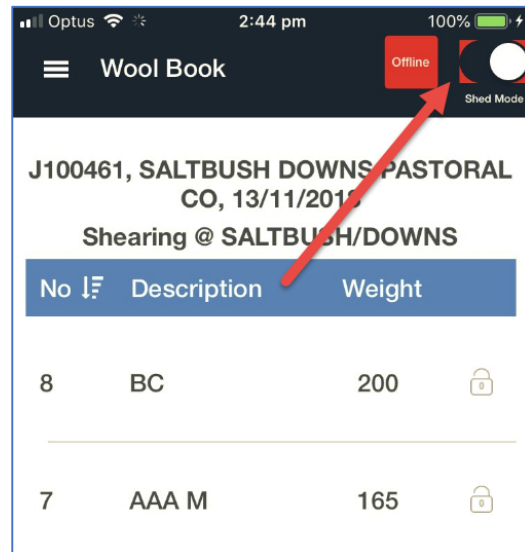

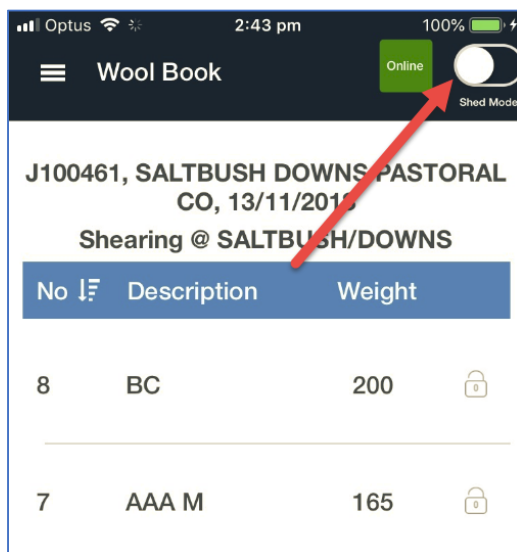

### **Bug Fixes**

- Fixed issue when editing a Marketing Organisation on a Farm Account.
- Fixed isolated issue where a bale retained a Line ID but was not visible on a Specification. This was triggered when the bale was removed and added multiple times from more than one line, with several line sequence changes.
- Under some circumstances Line Numbers did not recalculate where a line on a Specification was deleted. This has been fixed.

## Mobile App

### 'Shed Mode'

- With some users reporting performance concerns when in patchy or intermittent reception areas, a 'Shed Mode' switch has been implemented.
- The 'Shed Mode' switch allows the user to switch off the data synchronisation function within the WoolClip App (without turning off the device's mobile/data functions).
- When Shed Mode is ON the WoolClip App is OFFLINE. Mob and Bale data is then saved locally on the device.
- The user can then decide when to upload/synchronise the data by turning the Shed Mode OFF (i.e. the WoolClip App is ONLINE).

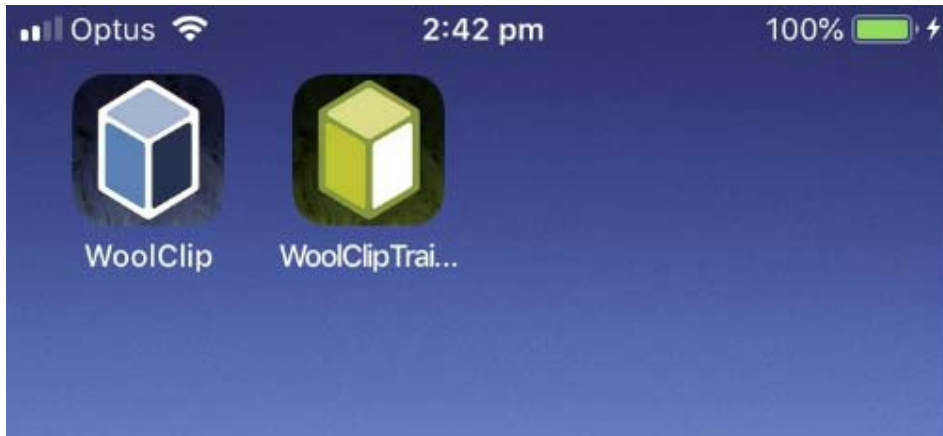

### Performance

- Performance and response time improvements on Android and Apple phones.
- Reduction in amount of system data downloaded on load.
- Improved stability.

### Training App

- The WoolClip Training App has been released. The icon is a distinct green colour (see image below). This App is for training purposes and is used in association with the training site.

### Bug Fixes

- Removed intermittent Notification request option.
- Removed Geo-location error.
- Fixed continual syncing loop issue where mob was deleted in App in certain situations.
- Fixed issue with Forgot Password request.
- Fixed issue with logging in Offline.

### Important:

If you have data that is not yet synchronised/up-loaded, please open the App with a data connection to ensure all data is uploaded to the server(s). Failure to do so may result in lost data.

To update your App please uninstall the WoolClip App on your phone and download the most recent version from the App store (Version 1.2 on the login page).

Your data will be retrieved from the WoolClip servers once you reopen in the new version.

## Next Release(s)

**The next release(s) will include updates to the following modules:**

Farm Account

Farm Account Verification

Line Builder

Wool Book

Team

NWD

Specification Finalisation

Improved App upgrade
